PERSONAL SUMMARY

➢ **Senior Software Developer and manager** with more than 10 years of experience participating in IT Projects like building desktop, web, and REST applications, defining and enhancing organizational processes; and using SQL Standard with different Relational Database Management Systems.

➢ In charge of a dev team of 9 people, organizing the sprints, mentoring new devs, improving techniques, and growing a nice environment in two different countries

➢ Experience in all stages of software development life cycle like Requirements Definition and Administration, Design, Implementation, Testing, and Deployment. Modeling Applications using Object-Oriented Analysis and Design technologies, using the SCRUM software development methodologies and techniques, employing Software Configuration Management and Version Control Systems like Git and Team Foundation Server or Azure portal.

➢ My communication is effective regardless of the level of the interlocutor, with a critical analysis capacity to discover the most efficient way to solve problems, detect opportunities for improvement and define priorities. A decisive person who likes to undertake challenges. Able to convey my ideas so that all team members go in the same direction, studying each participant to enhance their skills, learn from each other and obtain maximum results, not giving orders but showing how to work together. Passionate about creating new inventive solutions
